

Ascentac Multi-DRM is a system used to manage the distribution and usage of digital content so as to protect high-value digital assets. It offers content protection against unauthorized access to the digital content.

Multiple Digital Right Management

Ascentac Multi-DRM

A Cost-effective Way to Prevent Leakage of Content or Unauthorized Use

Feature

- Packaging and license service
- Support for multiple DRM solutions, including Apple FairPlay, Microsoft PlayReady and Google Widevine
- Intuitive user interface and easy to integrate REST API
- Content Delivery Network (CDN) integration

Application

- Content protection

Description

Ascentac Multi-DRM supports HLS, MPEG-DASH and Microsoft SS with DRM solutions including Apple FairPlay, Microsoft PlayReady and Google Widevine. It can reduce encryption cost as a single encryption process is used to target different platforms with its native DRM.

It is straightforward to integrate Ascentac Multi-DRM into your existing video infrastructure. Our REST API is flexible and developer-friendly.

Supporting Multiple DRM Technologies
