Description

Ascentac FiberGo OCI610, Optical Fiber Identifier, can detect optical signal presence, type and direction and measure relative optical power anywhere on a single-mode or multiple-mode fiber. Its reliable and safe macro-bending technique does not disrupt service. Nor does it overstress or damage fibers.

The series can automatically identify frequencies of 270Hz, 1kHz, or 2kHz. Its OLED display ensures visibility even under direct sunlight, and in bright environments, the device supports ambient light calibration.

It is compatible with 0.25mm bare fiber and fiber patch cords of 0.9mm, 2.0mm, and 3.0mm. The four-in-one design eliminates the need for changing clamps.
